

Workshop 1ZK30

Week 2 – Problem Identification

DESIGN THINKING

DESIGN THINKING

Empathize

Understand the experience, situation, and emotions of the person you are working for

- **Observe** users and their behavior in their daily lives
- **Conduct** interviews and conversations with people. Ask questions like “Why?”
- **Watch and listen**: Ask someone to perform a task and tell them what to do

DESIGN THINKING

Define

Process and consolidate the results to understand the customer's perspective

- **Users:** Develop an understanding of the person you are designing for
- **Needs:** Make a selection of important needs
- **Insights:** Record the insights you have gained and define principles

INTRODUCTION

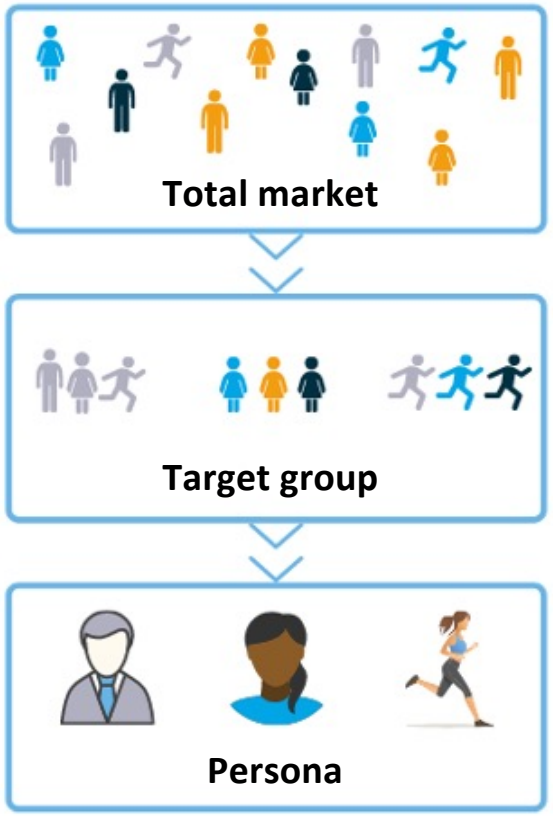

How many interviews have you conducted so far?

Who did you talk to?

How and what did you observe as an “anthropologist”?

What were your experiences?

INTRODUCTION

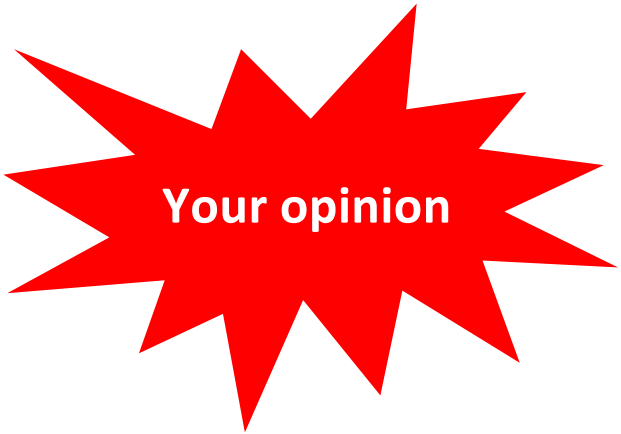

- **Users/customers determine the success or failure of your idea**
- **Therefore, consider your users' perspective in every decision you make**
- **User/customer interviews are the best way to understand your customers' perspective and gain in-depth knowledge about them**
- **Base decisions and strategies on data and facts rather than assumptions**

→ Today: Evaluate your collected data to create a persona

PAIN POINT ANALYSIS

Why is a pain point analysis **important?**

PAIN POINT ANALYSIS

Identifying user/customer needs

- What have people told you?
- What are their problems?
- What would make their lives easier?

Look for

- things that bother them (pains)
- Things that would improve their situation (gains)

GROUND RULES FOR THE WORKSHOP

Stick to time & tasks – we run on a tight schedule.

Trust the process – follow the steps, don't jump ahead.

Focus fully – no phones/laptops unless needed for the task.

Individual task = individual – when asked to work alone, *work silently*.

Group task = group – only discuss once it's time to share.

Ask early – if you don't understand the deliverable, raise your hand before the clock starts.

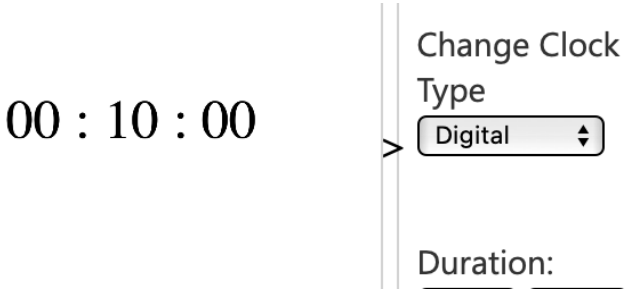

Respect & listen – value everyone's input, one person speaks at a time.

Have fun & be creative – energy matters!

PAIN POINT ANALYSIS (INDIVIDUAL)

10 minutes

Identify pains and gains of users/customers

- Work alone
- Write 1 pain or gain per Post-it note
- You have 10 minutes

PAIN POINT ANALYSIS (GROUP)

Sort Pains and Gains

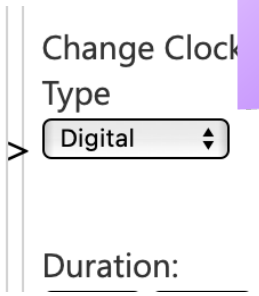

5 minutes

00 : 05 : 00

Duration:

Give Feedback

Now present your three most important pains and gains of the users/customers to each other in the group.

- Exchange ideas
- Give each other feedback
- Discuss
- You have 15 minutes.

PERSONA CANVAS (GROUP)

Representation of target groups or users

- Better understand and visualize a user/customer group
- Give your customer segment a face and a name
- Put yourself in the customer's shoes
- Talk about users/customers and their characteristics in a more tangible and concrete way
- Storytelling

PERSONA CANVAS EXAMPLE

Peter

("Just let me work"; owner of a locksmith's shop)

Peter is 52 years old, has a wife and two children, a daughter and a son.
He lives in Eindhoven and runs a small locksmith's shop with three employees.

Context

- Workwear is just a means to an end
- Appearance is not important
- Works in a harsh and dirty environment
- Works between the factory floor and the
- office
- Not very interested in washing, not interested in "Company XY" processes
- Want reliable quality
- Receive complaints unfiltered and immediately with

Needs/Pain Points

- Functionality and organization
- No unnecessary thoughts about issues that distract from the actual work
- Pays money and wants a reliable routine, prefers as little contact as possible
- Annoyed by complicated and inflexible processes regarding changes, complaints, etc.
- Want "Company XY" to relieve them of their core business, but no more than that

Likes

- Reliability, security, and peace of mind
- High-performing employees, good atmosphere
- Focus on *your* work, not paperwork

Dislikes

- Unforeseen problems
- Unnecessary, repetitive processes
- Poorly executed work
- Unnecessary communication and bureaucracy

POV

Peter has been a welder since he was 15 and carries out his work with passion and dedication. He has little interest in business matters outside of joining two metals together, so his clothing must be clean and functional.

Create your persona

- Think about the largest user/customer group you have spoken to
- Create the persona using your Post-it notes
- Add the missing categories
- You have 30 minutes

00 : 30 : 00

Change Clock Type

Digital

Duration:

30 minutes

PROBLEM STATEMENT

Before we can solve a problem, we must define it. A perfect solution to the wrong problem will not work.

A good problem statement is:

- Short, precisely defined, and easy to understand
- People-oriented—i.e., focused on the people you want to help
- Defines the problem precisely
- Open to many different solutions and approaches

What is the problem you are trying to solve?

Questions to help you narrow down your problem:

- Who is involved in and affected by the problem?
- What are the effects of the problem?
- What are the causes of the problem?
- Why is solving the problem important for those affected and for the company?
- Where is the problem located or where does it have an impact?
- When did the problem start?

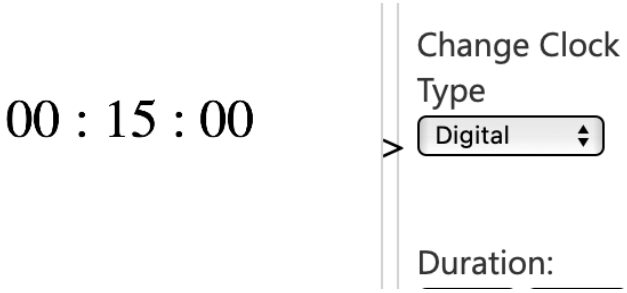

PROBLEM STATEMENT

Who?	**Who has the problem….**
What?	**What is the problem…**
When?	**When/where does the problem occur…**
Why?	**Why is it important to address it for the customer…**

PROBLEM STATEMENT (GROUP)

15 minutes

Formulate a problem statement

Who?	**Who has the problem….**
What?	**What is the problem…**
When?	**When/where does the problem occur…**
Why?	**Why is it important to address it for the customer…**

DELIVERABLES AFTER THIS WORKSHOP

Deliverables after this workshop for your Team Assignment 1

- Overview of identified pains/gains (in your neighborhood)
- At least one persona canvas
- A formulated problem statement (Who? What? When? Why?) → It should be logically derived from all your data, pains and gains, persona etc. with reasoning.
- Please collect more data (interviews, observations etc.) and adapt your persona and problem statement if needed (Design thinking = iterations!)
- REMINDER: MAKE PHOTOS OF YOUR WORKSHOP OUTPUTS!
