SUSTAINABILITY AT DAF TRUCKS

Eri van de Laar
Jac van Orsouw
September 7, 2026

AGENDA

- Introduction DAF Trucks
- Sustainability
- Challenges
- Continuous improvement

DAF
NV van DOORNE'S MACHINEFABRIEK
CONSTRUCTIE-WERKPLAATS
P.C.V.D. GRIEND
DEN HAAG
FINA
N.V. CARTONNAGEFABRIEK
BOERMAN TRANSPORT
DAF Trucks
TRUCK OF THE YEAR
EURO 5
EURO 6
XF XD XD+

1949 - 2026

77

YEARS

of truck production

A PACCAR COMPANY DRIVEN BY QUALITY

DAF

DAF

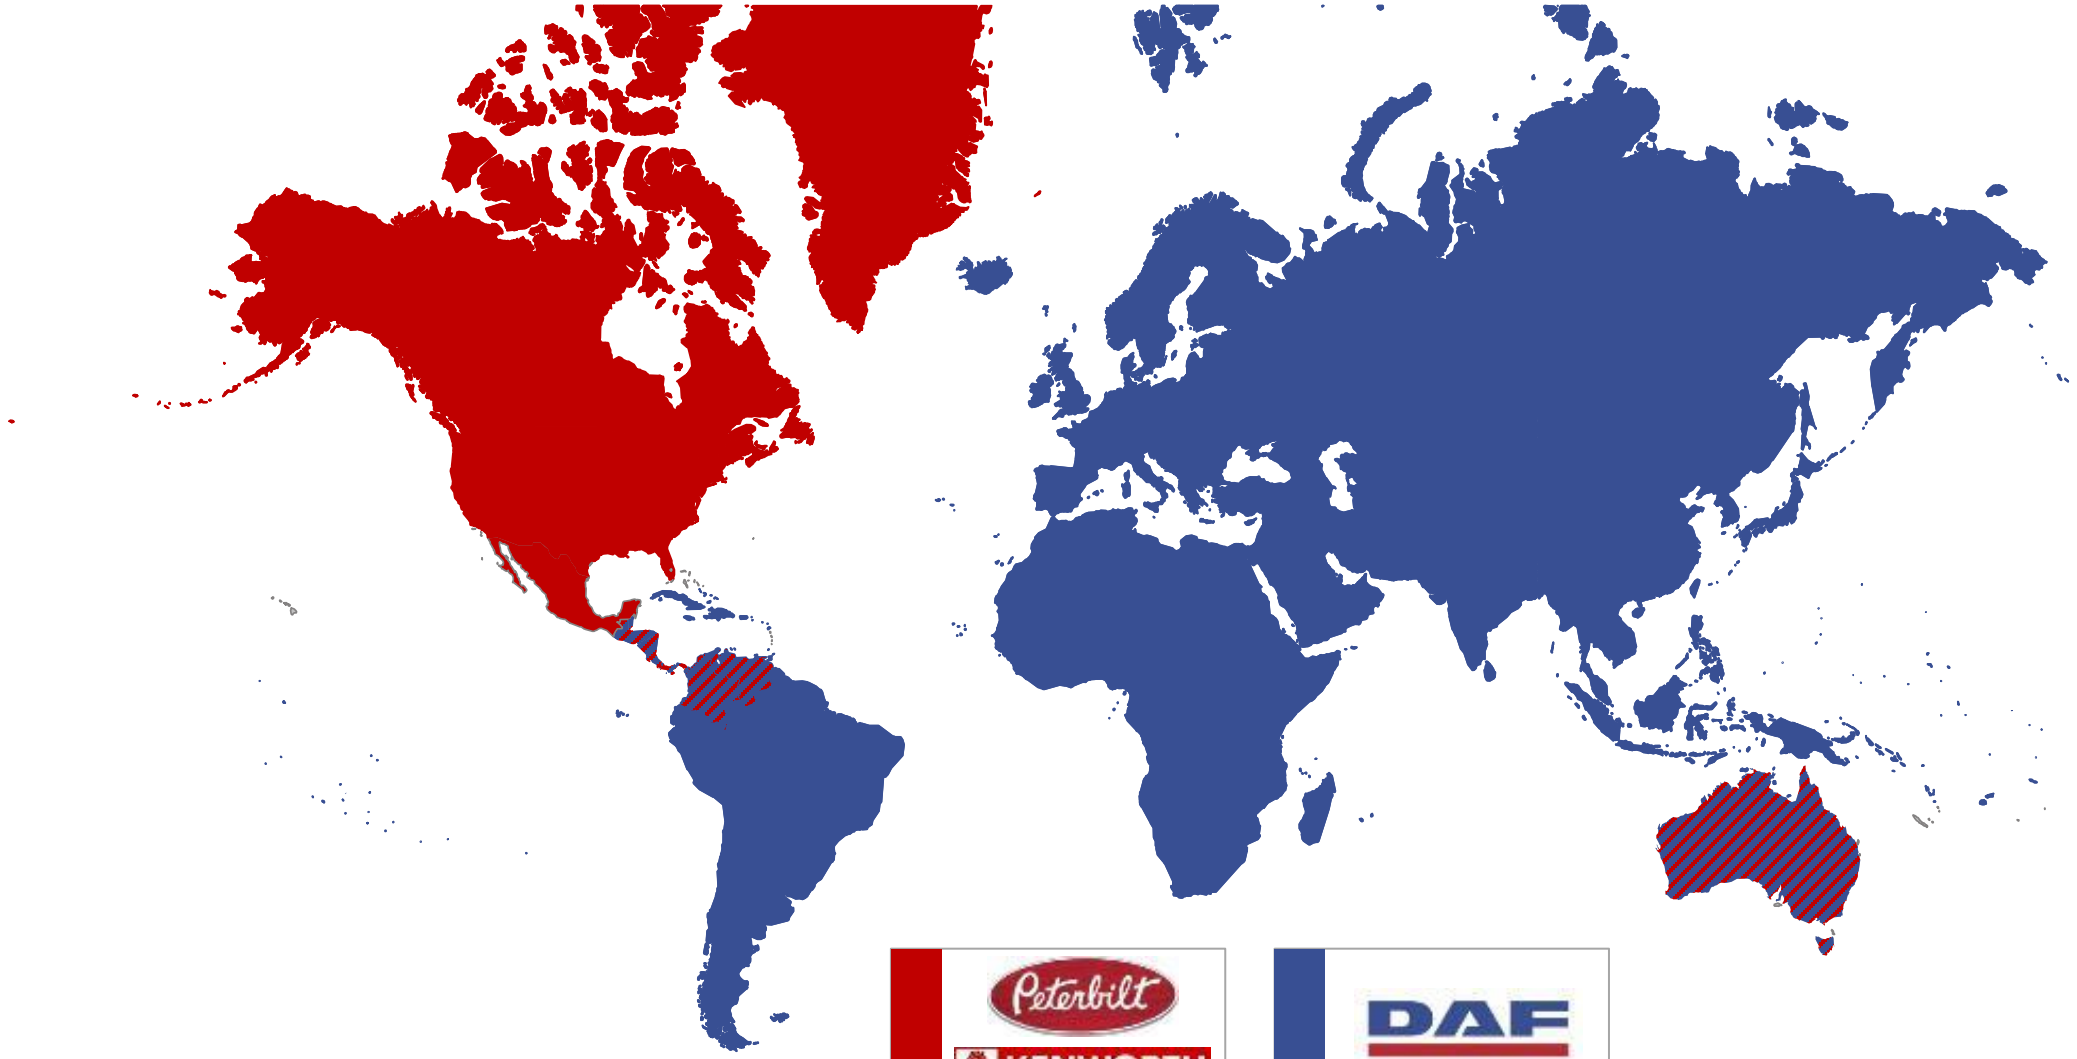

A PACCAR COMPANY

PACCAR AROUND THE GLOBE

Engine Factory

Sheet Metal Factory

Truck Assembly

PACCAR Parts Distribution Center

Engine Test Center

Product Development

Electric Truck Assembly

DAF DIGITAL TECHNOLOGY CENTRE

SUSTAINABILITY = ESG

GLOBAL CHALLENGES

Climate change

Material scarcity

Social inequality

COMPETITIVE ADVANTAGES OF ADOPTING ESG

Risk Mitigation

Customer value

Cost reduction

(Upcoming) legislation

Our Mission

We are a Global Technology Leader providing Sustainable Transport Solutions that Drive our Customers' Success.

Our Vision

We create First Class Sustainable Transport Solutions to Exceed Customer Expectations, Inspire our Employees and Contribute to a Better World.

Sustainability Framework

	Environment		Social & Governance	
Our Mission	EMISSION REDUCTION	CIRCULARITY	CARE FOR PEOPLE	RESPONSIBLE BUSINESS
Our Supply Chain	Sustainable Sourcing	Circular Sourcing	Working Conditions	Responsible Sourcing
DAF	Sustainable Production Facilities	Circular Processes	Best Place to Work	Business Values & Conscious Control
Our Customers & Dealers	Contribute to Sustainable road transport	Circular Products	Care for Customers & Dealer Employees	Best Products & Services for the Business
The World we Live in	Sustainability Strategy	Circular Strategy	Giving Back to Society	Responsible Transport Solutions

UN SDG

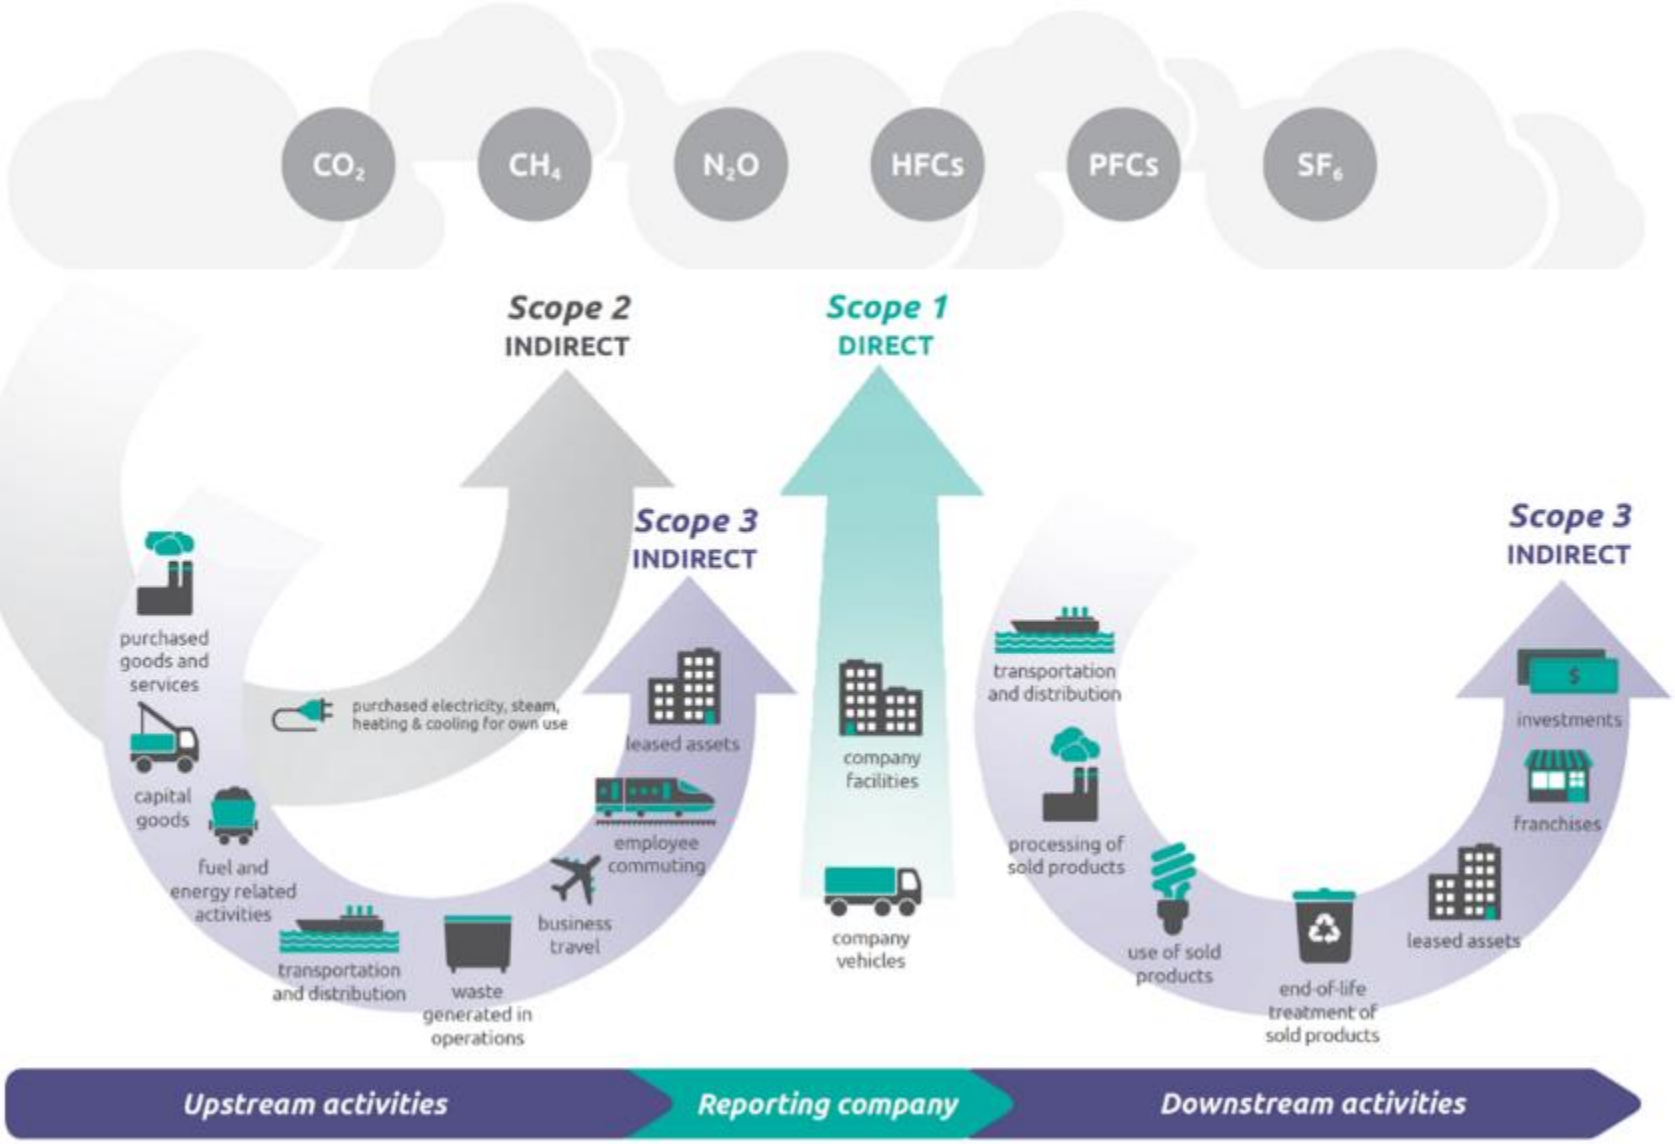

Sustainability Framework

	Environment		Social & Governance	
Our Mission	**EMISSION REDUCTION**	**CIRCULARITY**	**CARE FOR PEOPLE**	**RESPONSIBLE BUSINESS**
Our Supply Chain	Sustainable Sourcing	Circular Sourcing	Working Conditions	Responsible Sourcing
DAF	Sustainable Production Facilities	Circular Processes	Best Place to Work	Business Values & Conscious Control
Our Customers & Dealers	Contribute to Sustainable road transport	Circular Products	Care for Customers & Dealer Employees	Best Products & Services for the Business
The World we Live in	Sustainability Strategy	Circular Strategy	Giving Back to Society	Responsible Transport Solutions
UN SDG	13 CLIMATE ACTION	12 RESPONSIBLE CONSUMPTION AND PRODUCTION	11 SUSTAINABLE CITIES AND COMMUNITIES; 8 DECENT WORK AND ECONOMIC GROWTH	9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

GHG EMISSION SCOPE 1,2,3

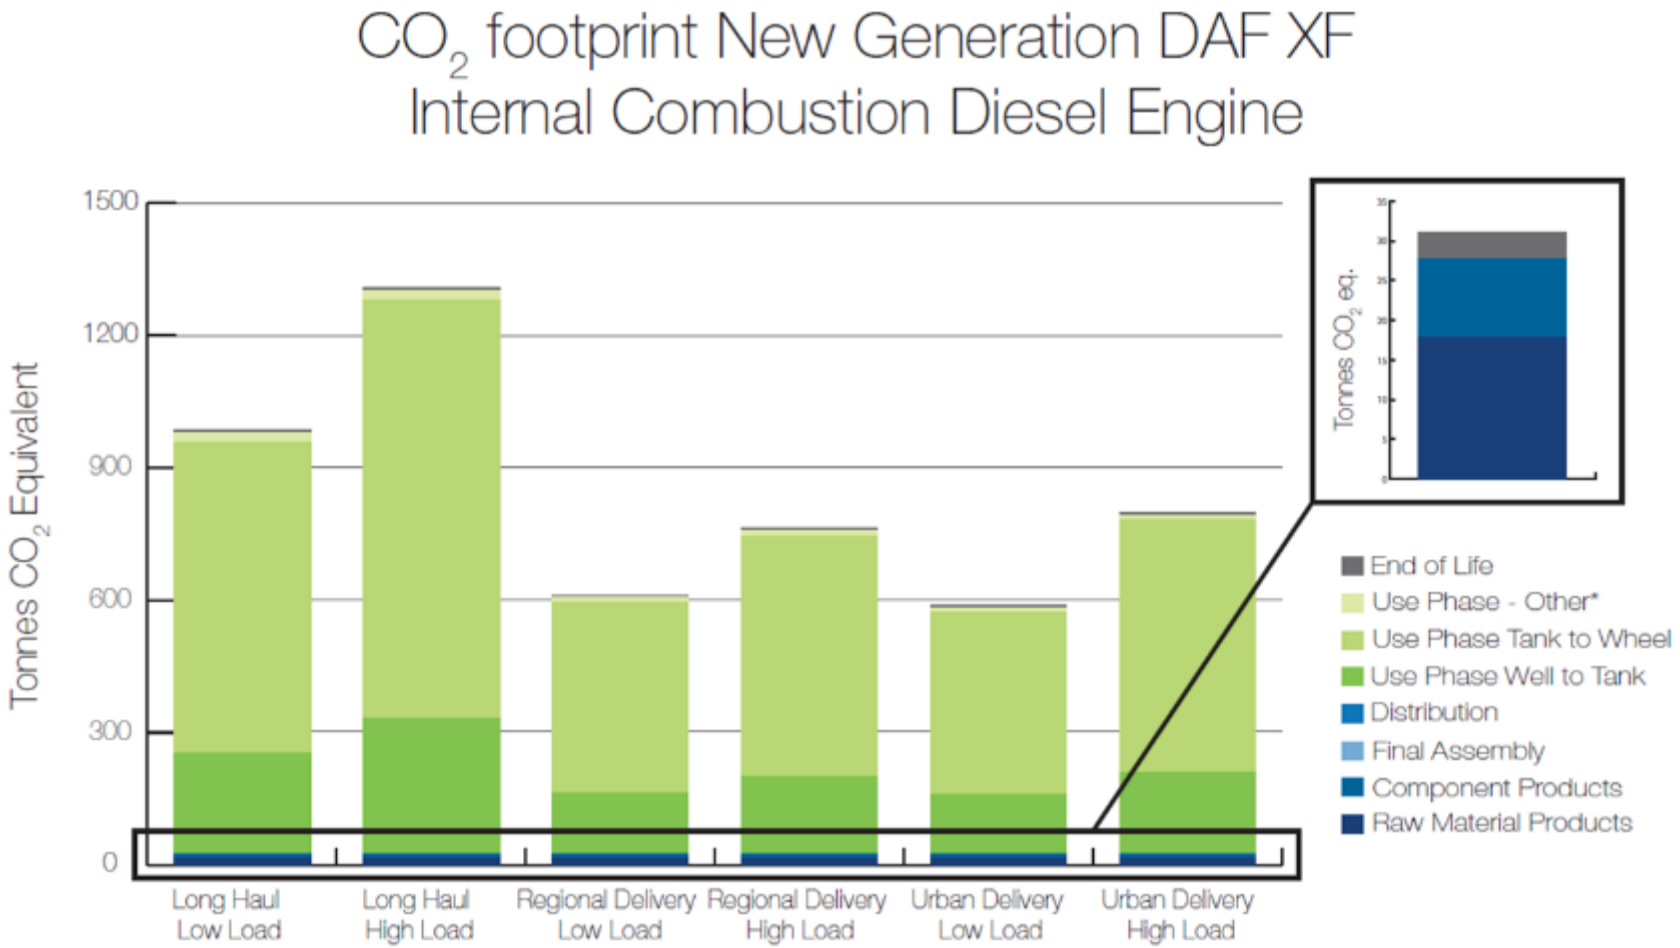

GLOBAL WARMING POTENTIAL NGD XF ICE

Note

- Production = shades of blue
- Use phase = shades of green

Observations

- Use phase has by far the most impact
- Tank-To-Wheel (TTW) has most GWP
- Well-To-Tank (WTT) also has considerable GWP
- Higher load = more fuel use
- In GWP/t*km, the high load scenarios are more favorable than low load, despite using more fuel

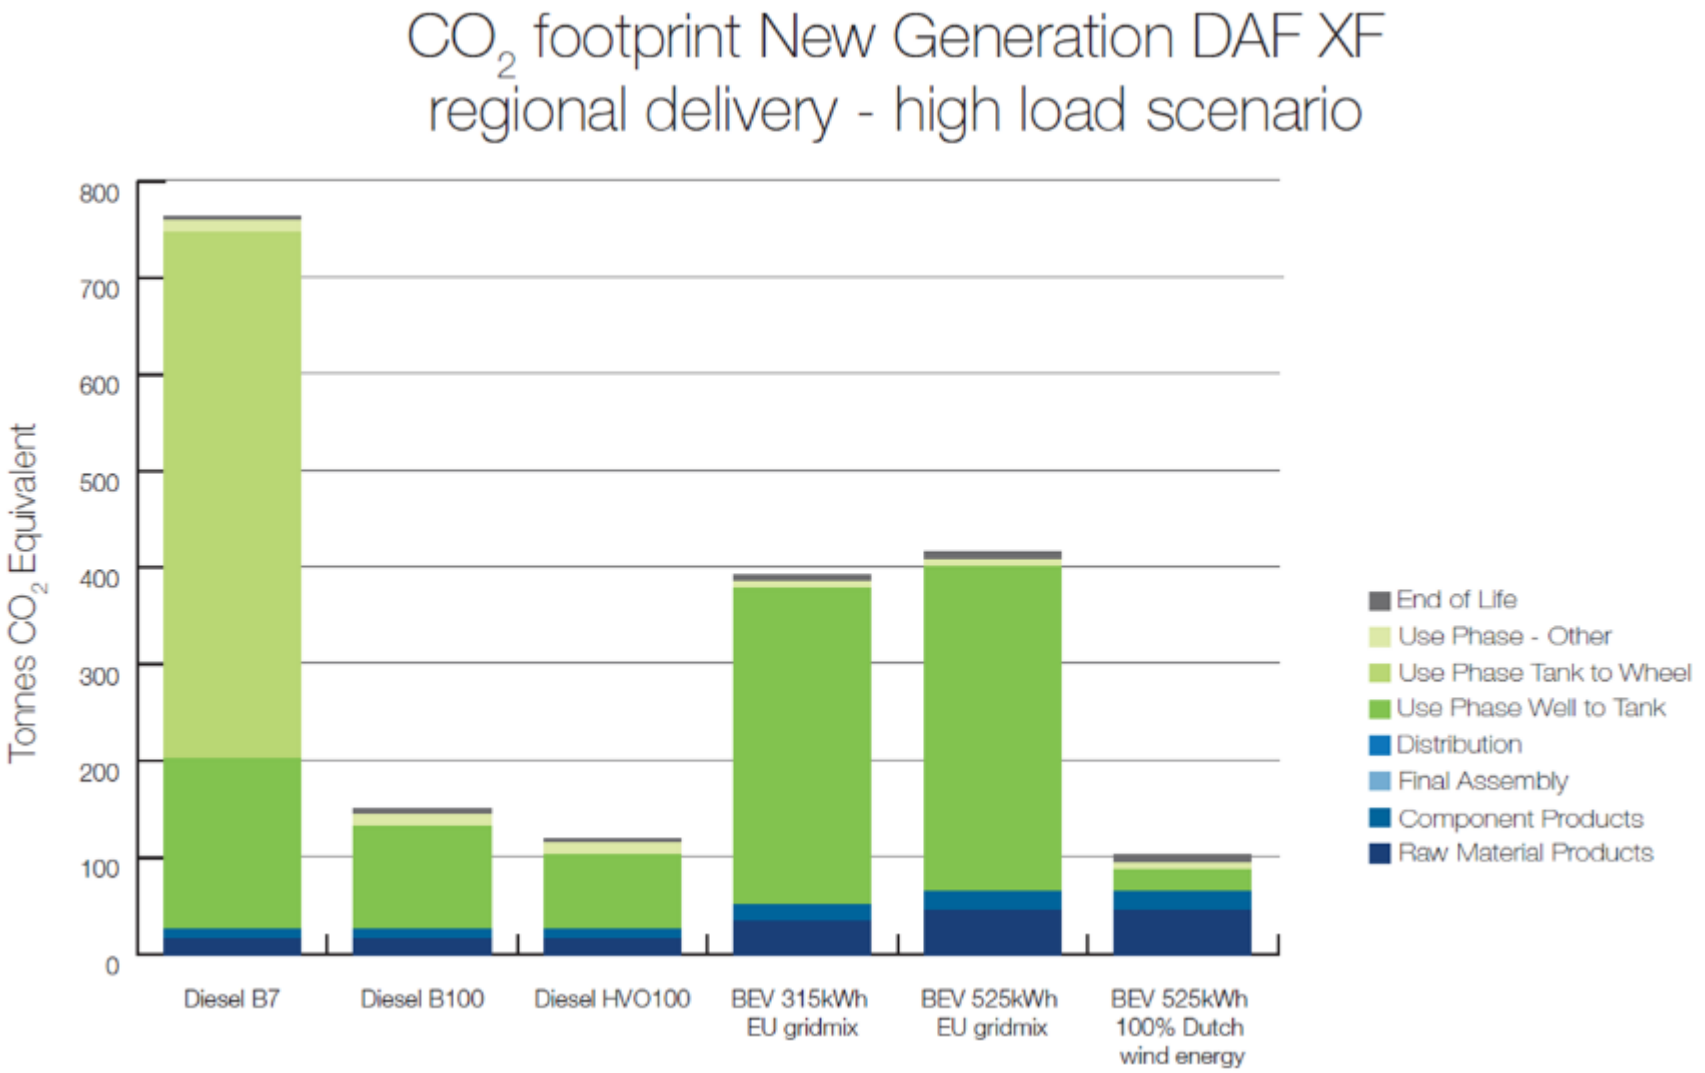

GLOBAL WARMING POTENTIAL NGD XF ICE VS BEV

Note

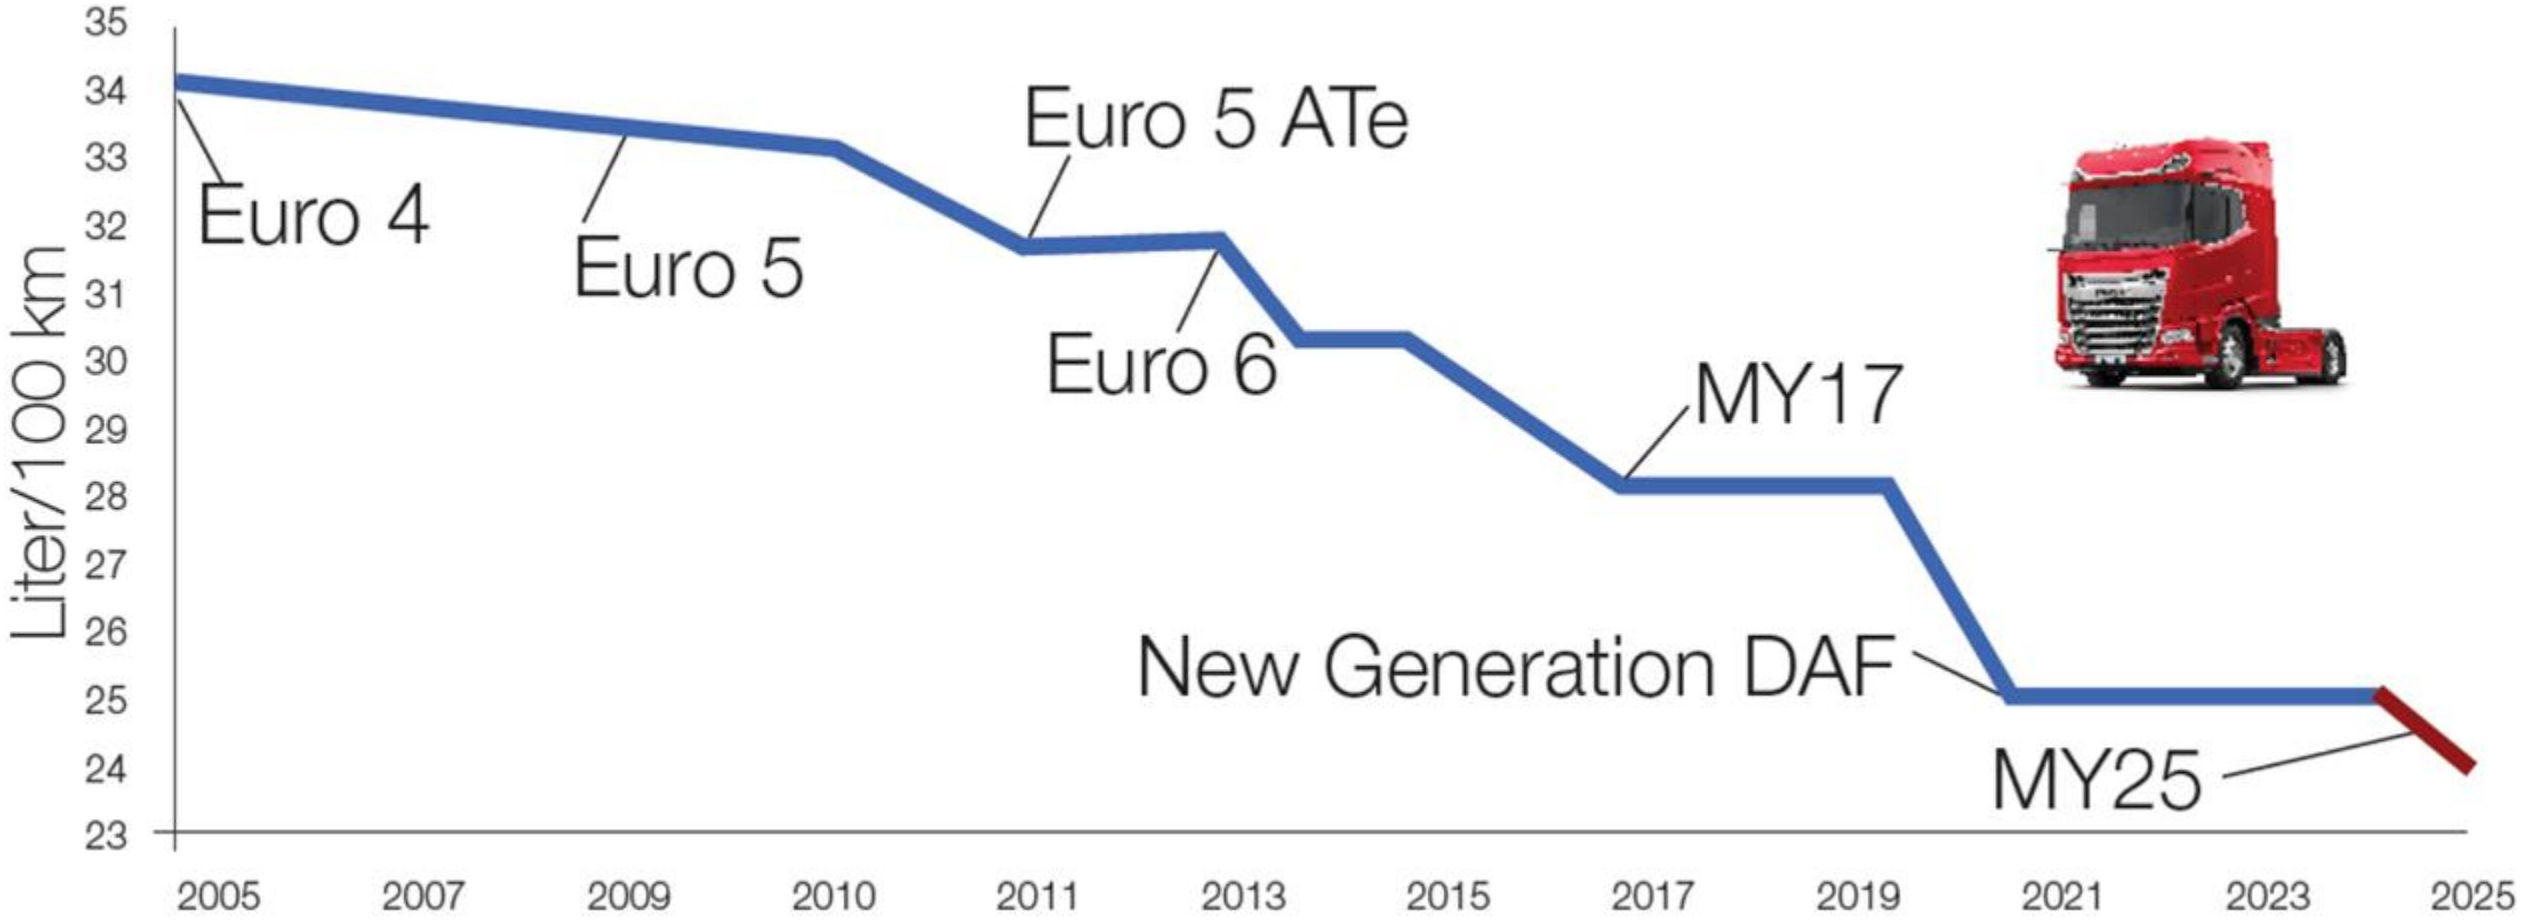

- Production = shades of blue
- Use phase = shades of green
- Based on regional delivery, high load scenario
- BEV based on EU gridmix 2021

Observations

- BEV or alternative fuels have no TTW emissions
- BEV emits around half the GHG compared to an ICE
- More impact production phase caused by increased vehicle weight and battery impact

FUEL EFFICIENCY IMPROVEMENTS

NEW GENERATION DAF

- First & Only Trucks meeting new EU Masses & Dimension Regulations

- **20% Better Aerodynamics**
- **10% Lower Fuel Consumption**
- **10% Lower CO_2 Emissions**

- New Standard in Safety

- Superior Driver Comfort

- Powering Customer Success

- The Next Chapter in DAF Transport Efficiency

NO ‘ONE SIZE FITS ALL’ SOLUTION

HVO/ e-Fuels

Hybrid

Battery-Electric

Hydrogen

CIRCULARITY R-LADDER

- **Risk mitigation**
- **Customer value**
- **Cost reduction**
- **(Upcoming) legislation**

CIRCULARITY INITIATIVES

Shift to mono material packaging PACCAR Parts

Maximum use of steel plates by optimized nesting

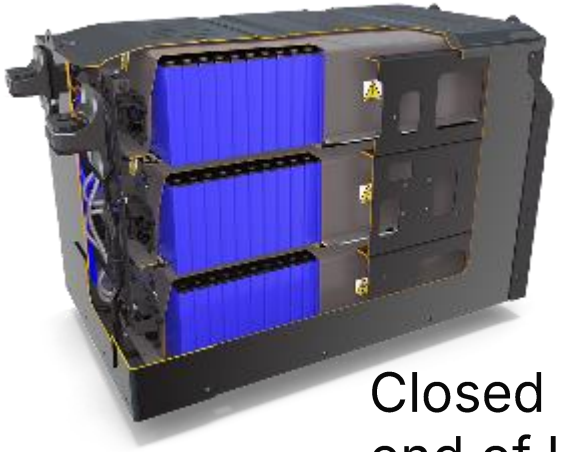

Waste separation

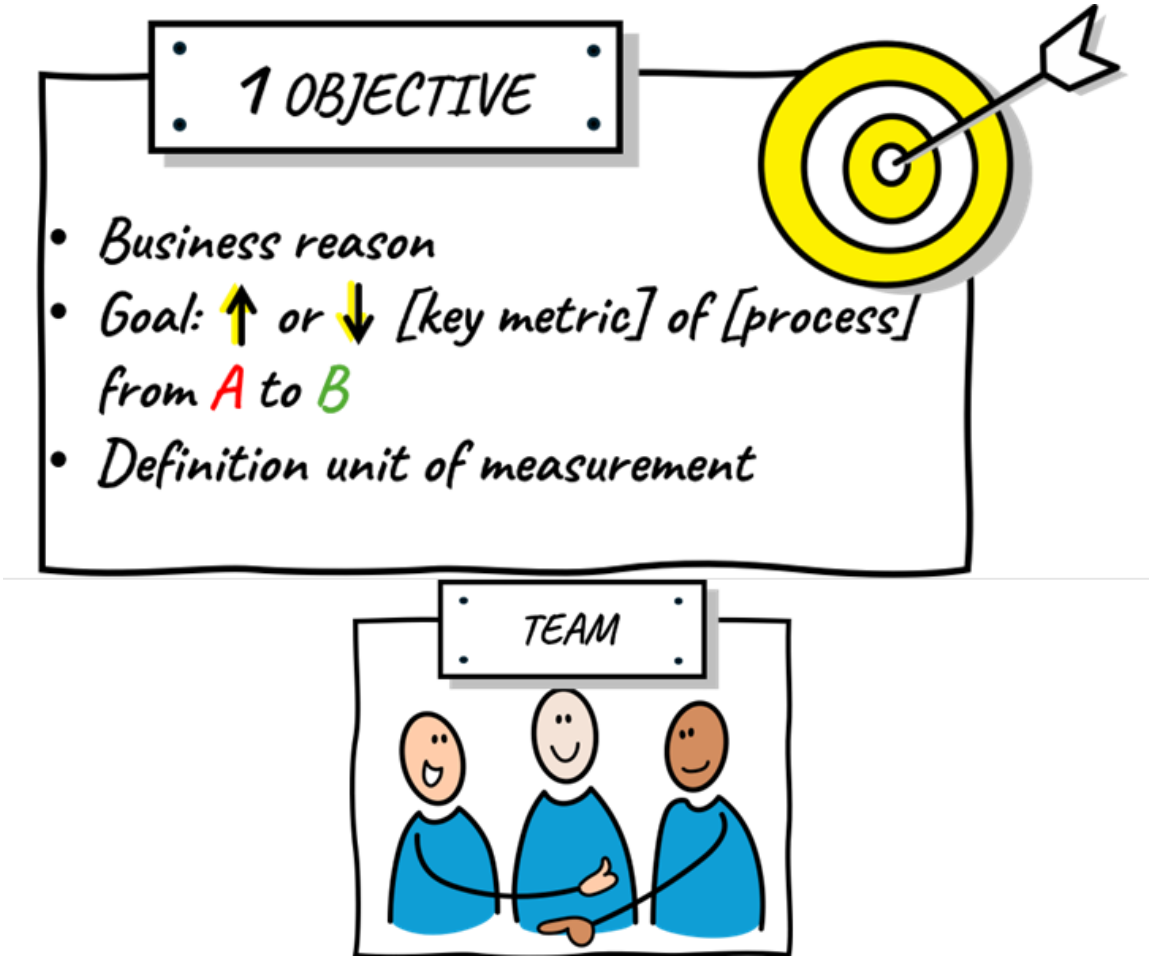

>50 years inhouse remanufacturing

Closed loop end of life batteries

10.000 SUSTAINABILITY MANAGERS

1 : PROJECT DESCRIPTION AND TEAM FORMATION

Define the goal

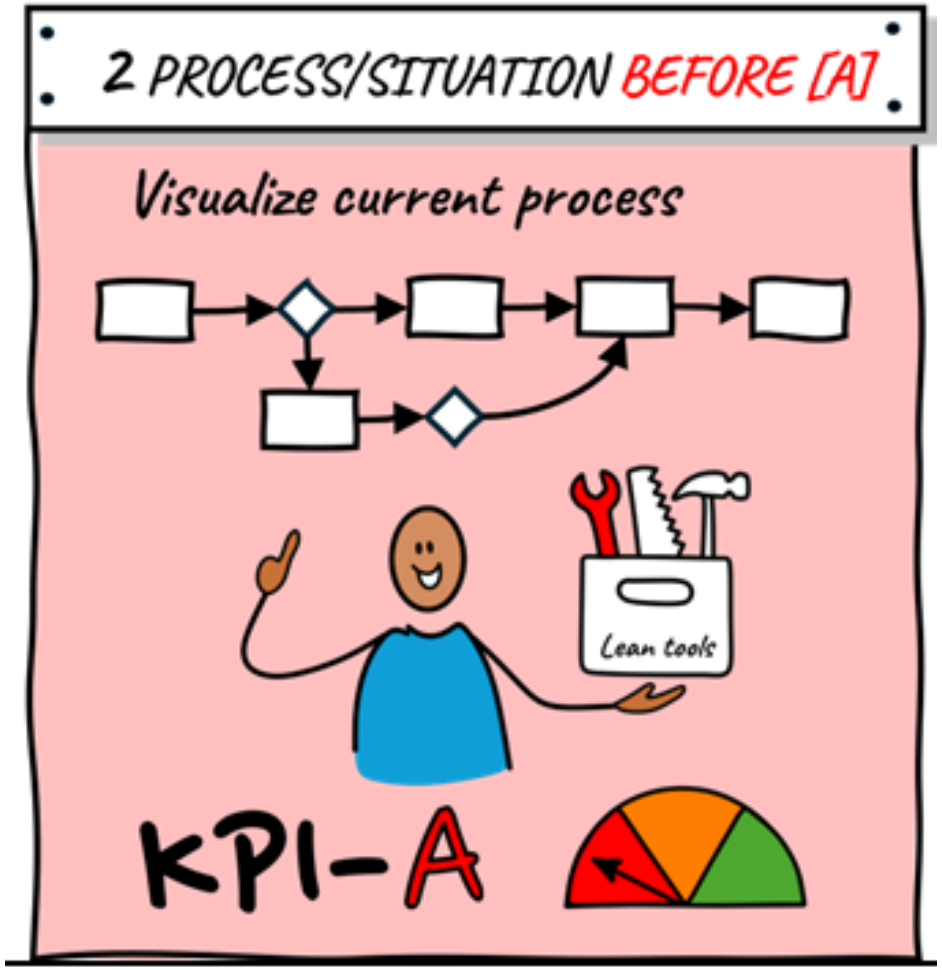

Create a team

A team should always have (at least!):

- A process owner
- A customer representative
- A supplier representative

Assign the project team leader

2: DEFINE AND MEASURE CURRENT SITUATION

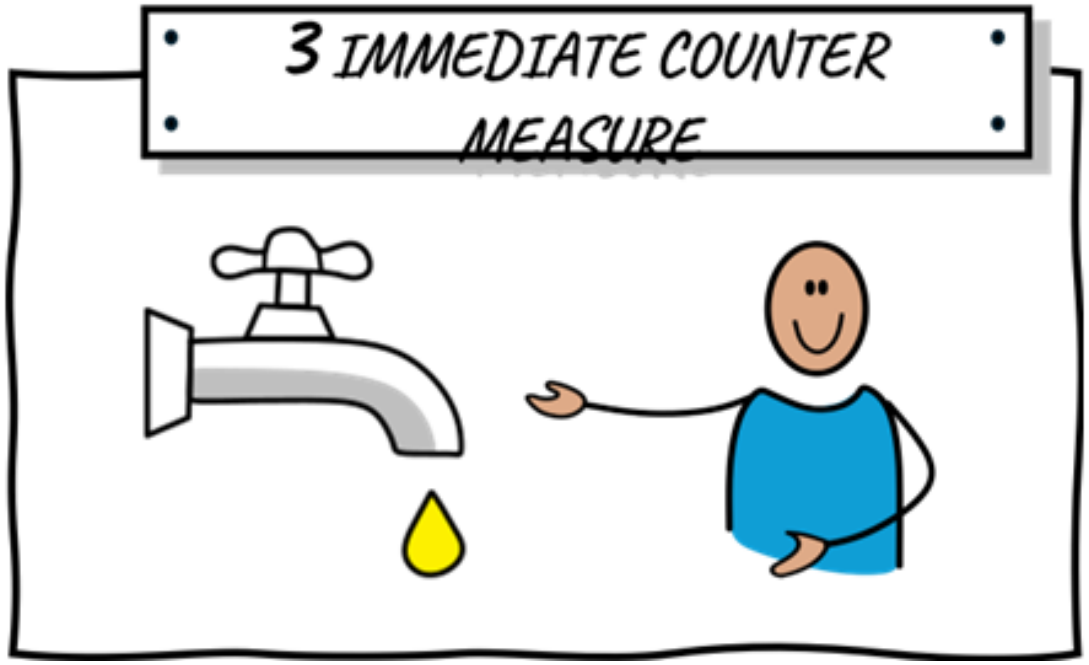

Describe current process
(for example)

- Walking distance in meters
- Process flow
- Grams CO2 emission
- Kg used materials

Both qualitative and quantitative

3. IMMEDIATE COUNTER MEASURE

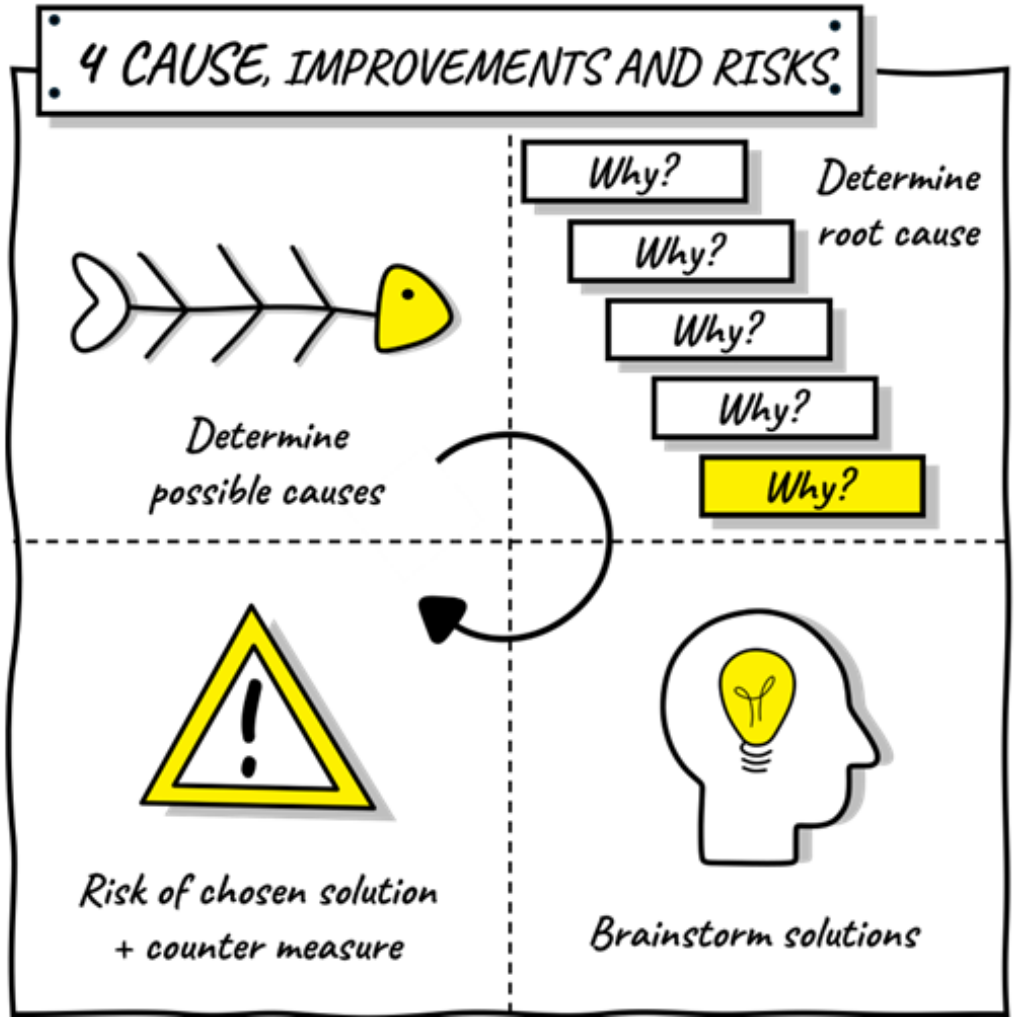

Protect the customer, Stop the problem

For example:

- Add additional quality check

This is a temporary solution only!
Until the root cause has been solved.

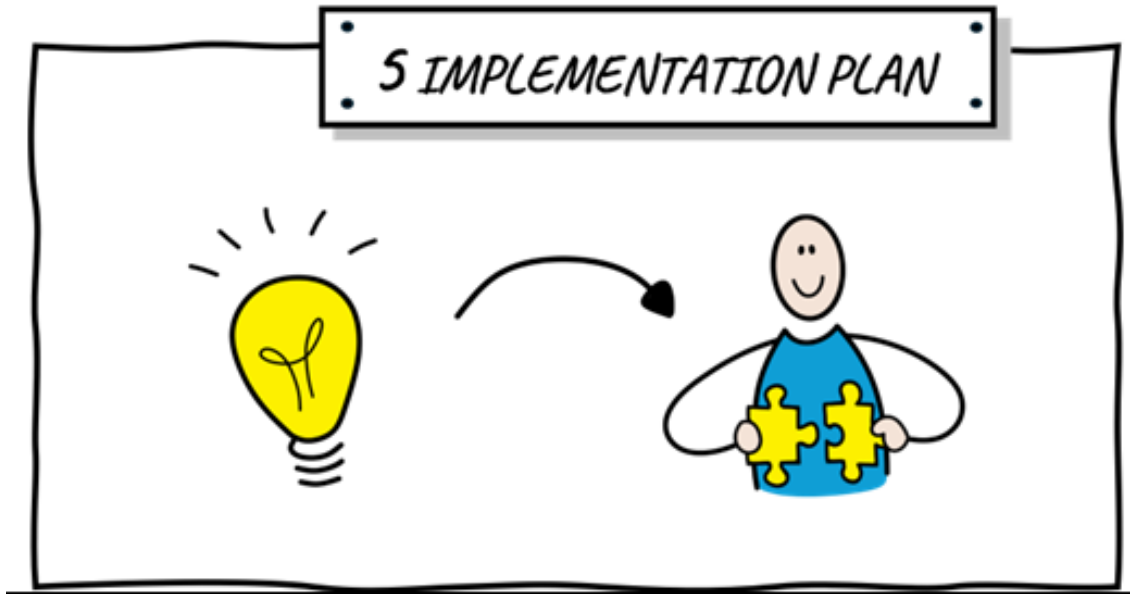

4. ROOT CAUS ANALYSIS

Find the root causes, improvements and risks

- What can be causing the problem?
- What is the root cause?
- How can this be solved?
- Define the potential risks related to the solution

5. IMPLEMENTATION PLAN

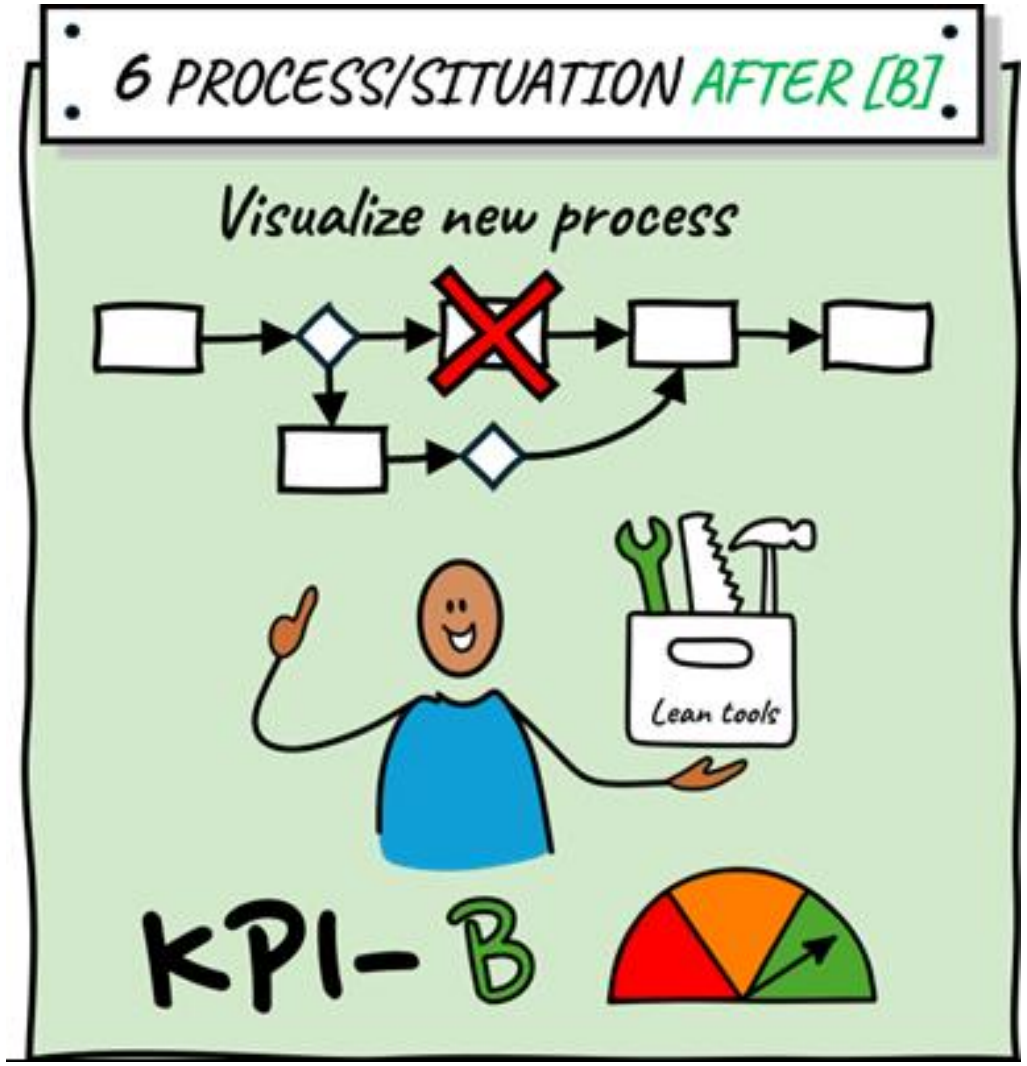

Implementation plan should have

- What actions are required
- Who is responsible for this
- What is the deadline

Like a project charter

6: DEFINE AND MEASURE NEW SITUATION

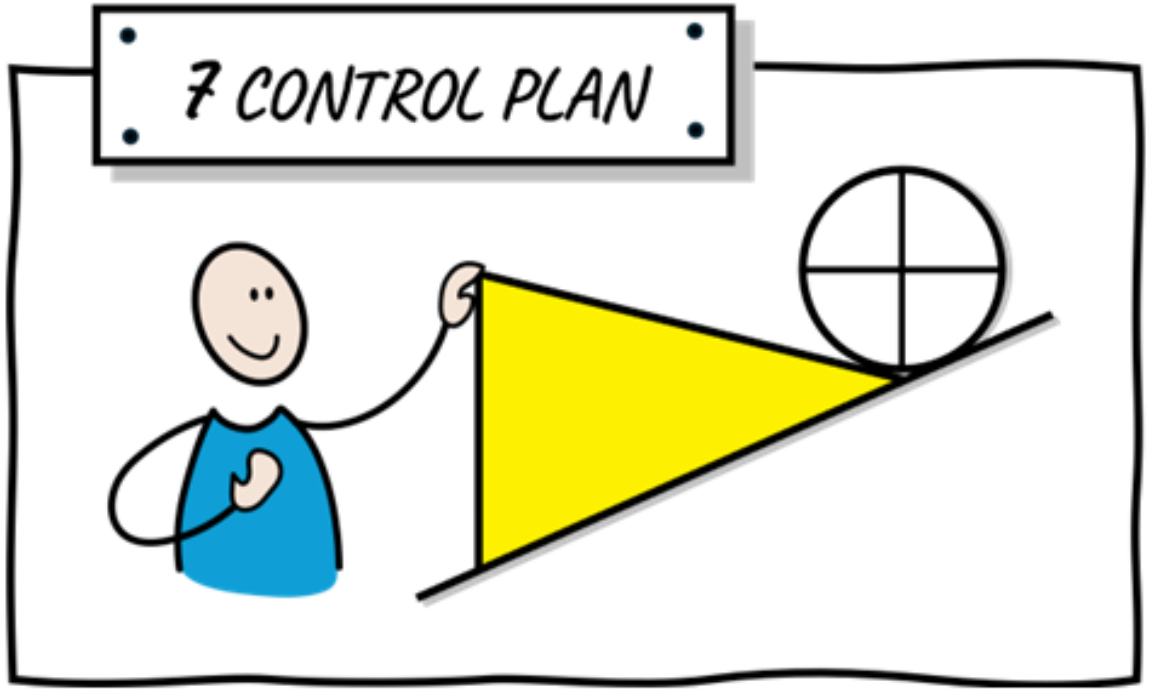

Describe updated process
(for example)

- Walking distance in meters
- Process flow
- Grams CO2 emission
- Kg used materials

Both qualitative and quantitative

7: STANDARDIZATION AND CONTROL PLAN

Project results

(for example)

- Savings in euro's, gr CO_2 and kg material

Control plan

- How did you make sure the problem will never come back
